NAME

APR::BucketType - Perl API for APR bucket types

Synopsis

```
use APR::BucketType ();
```

```
my $name = $b_type->name;
```

Description

"APR::BucketType" allows you to query bucket object type properties.

API

"APR::BucketType" provides the following functions and/or methods:

"name"

Get the name of the bucket type:

```
my $bucket_type_name = $b_type->name;
```

```
arg1: $b_type ( "APR::BucketType object" )
```

```
ret: $bucket_type_name ( string )
```

since: 2.0.00

Example:

```
use APR::Bucket ();
use APR::BucketType ();
my $eos_b = APR::Bucket::eos_create($ba);
my $b_type = $eos_b->type;
my $name = $b_type->name;
```

Now \$name contains 'EOS'.
