Apache2::SiteControl::Radius(3pUser Contributed Perl DocumentatiApache2::SiteControl::Radius(3pm)

NAME

Apache2::SiteControl::Radius - Raduis authentication module for SiteControl

SYNOPSIS

In Apache/mod_perl's configuration:

PerlModule Apache2::SiteControl

<Location /sample>

...

 PerlSetVar SiteControlMethod Apache2::SiteControl::Radius

...

</Location>

<FilesMatch "\.pl\$">

...

 PerlSetVar RadiusSiteControlHost "localhost"

 PerlSetVar RadiusSiteControlSecret "mysecret"

...

</FilesMatch>

```
<Location /SampleLogin>
...
PerlSetVar RadiusSiteControlHost "localhost"
PerlSetVar RadiusSiteControlSecret "mysecret"
...
</Location>
```

DESCRIPTION

Apache2::SiteControl::Radius uses Authen::Radius to do the actual authentication of login attempts for the SiteControl system. See the SiteControl documentation for a complete apache configuration example. The synopsis above shows the configuration parameters for the radius module only, which is not a stand-alone thing.

The proper variables for the apache configuration of this modules are shown in the synopsis above. You must set the radius host and shared secret in all sections that will use the SiteControl system for authentication.
