Apache::Session::Serialize::UUEncodeUserContributed Perl DocApache::Session::Serialize::UUEncode(3pm)

NAME

Apache::Session::Serialize::UUEncode - Use Storable and "pack()" to zip up persistent data

SYNOPSIS

```
use Apache::Session::Serialize::UUEncode;
```

```
$zipped = Apache::Session::Serialize::UUEncode::serialize($ref);
```

```
$ref = Apache::Session::Serialize::UUEncode::unserialize($zipped);
```

DESCRIPTION

This module fulfills the serialization interface of Apache::Session. It serializes the data in the session object by use of Storable's "nfreeze()" and "thaw()" functions, and Perl's "pack()" and "unpack()". The serialized data is ASCII text, suitable for storage in backing stores that don't handle binary data gracefully, such as Postgres.

AUTHOR

This module was written by Jeffrey William Baker <jwbaker@acm.org>.
