Apache::Session::Store::DB_File(3pm) User Contributed Perl Document Apache::Session::Store::DB_File(3pm)

NAME

Apache::Session::Store::DB_File - Use DB_File to store persistent objects

SYNOPSIS

```
use Apache::Session::Store::DB_File;
```

```
my $store = new Apache::Session::Store::DB_File;
```

```
$store->insert($ref);
```

```
$store->update($ref);
```

```
$store->materialize($ref);
```

```
$store->remove($ref);
```

DESCRIPTION

This module fulfills the storage interface of Apache::Session. The serialized objects are stored in a Berkeley DB file using the DB_File Perl module. If DB_File works on your platform, this module should also work.

OPTIONS

This module requires one argument in the usual Apache::Session style. The name of the option is FileName, and the value is the full path of the database file to be used as the

backing store. If the database file does not exist, it will be created. Example:

```
tie %s, 'Apache::Session::DB_File', undef,  
    {FileName => '/tmp/sessions'};
```

AUTHOR

This module was written by Jeffrey William Baker <jwbaker@acm.org>.
