Apache::TestReport(3pm)      User Contributed Perl Documentation      Apache::TestReport(3pm)

**NAME**

Apache::TestReport - A parent class for generating bug/success reports

**Synopsis**

```
use Apache::TestReport;  
  
Apache::TestReport->new(@ARGV)->run;
```

**Description**

This class is used to generate a bug or a success report, providing information about the system the code was running on.

**Overridable Methods**

**config**

return the information about user's system

**report\_to**

return a string containing the email address the report should be sent to

**postit\_note**

return a string to close the report with, e.g.:

```
my($to, $where) = split '@', $self->report_to;
```

```
return <<EOF;
```

Note: Complete the rest of the details and post this bug report to

\$to <at> \$where. To subscribe to the list send an empty

email to \$to-subscribe@\$where.
