\$ man CPAN::Plugin.3perl

CPAN::Plugin(3perl) Perl Programmers Reference Guide CPAN::Plugin(3perl)

NAME

CPAN::Plugin - Base class for CPAN shell extensions

SYNOPSIS

```
package CPAN::Plugin::Flurb;
use parent 'CPAN::Plugin';

sub post_test {
    my ($self, $distribution_object) = @_;
    $self = $self->new (distribution_object => $distribution_object);
    ...;
}
```

DESCRIPTION

Alpha Status

The plugin system in the CPAN shell was introduced in version 2.07 and is still considered experimental.

How Plugins work?

See "Plugin support" in CPAN.

METHODS

plugin_requires

returns list of packages given plugin requires for functionality. This list is evaluated using "CPAN->use_inst" method.

distribution_object

Get current distribution object.

distribution

distribution_info

build_dir

Simple delegates for misc parameters derived from distribution

is_xs

Predicate to detect whether package contains XS.
