Cairo::GObject(3pm) User Contributed Perl Documentation Cairo::GObject(3pm)

NAME

Cairo::GObject - Integrate Cairo into the Glib type system

SYNOPSIS

```
use Cairo::GObject;

# Cairo and Glib are now loaded and the Cairo types are registered with
# Glib's type machinery. This allows you to correctly use Cairo types
# in signals and properties.
```

ABSTRACT

Cairo::GObject registers Cairo's types ("Cairo::Context", "Cairo::Surface", etc.) with Glib's type systems so that they can be used normally in signals and properties. If you have encountered an error akin to this:

```
GType CairoContext (15497280) is not registered with gperl
```

-- then you need to use Cairo::GObject.
