NAME

DBI::Gofer::Serializer::Base - base class for Gofer serialization

SYNOPSIS

```
$serializer = $serializer_class->new();  
  
$string = $serializer->serialize( $data );  
  
($string, $deserializer_class) = $serializer->serialize( $data );  
  
$data = $serializer->deserialize( $string );
```

DESCRIPTION

DBI::Gofer::Serializer::* classes implement a very minimal subset of the Data::Serializer API.

Gofer serializers are expected to be very fast and are not required to deal with anything other than non-blessed references to arrays and hashes, and plain scalars.
