DBI::Gofer::Serializer::StorableUserContributed Perl DocumentDBI::Gofer::Serializer::Storable(3pm)

NAME

DBI::Gofer::Serializer::Storable - Gofer serialization using Storable

SYNOPSIS

```
$serializer = DBI::Gofer::Serializer::Storable->new();  
  
$string = $serializer->serialize( $data );  
  
($string, $deserializer_class) = $serializer->serialize( $data );  
  
$data = $serializer->deserialize( $string );
```

DESCRIPTION

Uses Storable::nfreeze() to serialize and Storable::thaw() to deserialize.

The serialize() method sets local \$Storable::forgive\_me = 1; so it doesn't croak if it encounters any data types that can't be serialized, such as code refs.

See also DBI::Gofer::Serializer::Base.
