\$ man DBM_Filter::encode.3perl

DBM_Filter::encode(3perl) Perl Programmers Reference Guide DBM_Filter::encode(3perl)

NAME

DBM_Filter::encode - filter for DBM_Filter

SYNOPSIS

use SDBM_File; # or DB_File, GDBM_File, NDBM_File, ODBM_File

use DBM_Filter ;

`$db = tie %hash, ...`

`$db->Filter_Push('encode' => 'iso-8859-16');`

DESCRIPTION

This DBM filter allows you to choose the character encoding will be store in the DBM file.

The usage is

`$db->Filter_Push('encode' => ENCODING);`

where "ENCODING" must be a valid encoding name that the Encode module recognises.

A fatal error will be thrown if:

1. The Encode module is not available.

2. The encoding requested is not supported by the Encode module.
