Encode::Symbol(3perl) Perl Programmers Reference Guide Encode::Symbol(3perl)

**NAME**

Encode::Symbol - Symbol Encodings

**SYNOPSIS**

```
use Encode qw/encode decode/;

$symbol = encode("symbol", $utf8); # loads Encode::Symbol implicitly

$utf8 = decode("", $symbol);      # ditto
```

**ABSTRACT**

This module implements symbol and dingbats encodings. Encodings supported are as follows.

Canonical	Alias	Description
-----		
symbol		
dingbats		
AdobeZDingbat		
AdobeSymbol		
MacDingbats		

**DESCRIPTION**

To find out how to use this module in detail, see Encode.
