### NAME

Font::TTF::EBDT - Embeeded Bitmap Data Table

### DESCRIPTION

Contains the metrics and bitmap image data.

### INSTANCE VARIABLES

Only has 'bitmap' instance variable. It is an array of assosiative array keyed by glyph-id. The element is an object which consists of metric information and image data.

bitmap object

format Only 7 is supported.

height

width

horiBearingX

horiBearingY

horiAdvance

vertBearingX

vertBearingY

vertAdvance

imageData

## METHODS

`$t->read`

Reads the embedded bitmap data from the TTF file into memory. This routine should be called `_after_ {'EBLC'}->read`.

`$t->update`

Update EBLC information using EBDT data.

`$t->out($fh)`

Outputs the bitmap data of embedded bitmap for this font.

## BUGS

Only Format 7 is implemented. XML output is not supported (yet).
