NAME

HTTP::Body::XFormsMultipart - HTTP Body XForms multipart/related submission Parser

SYNOPSIS

use HTTP::Body::XForms;

DESCRIPTION

HTTP Body XForms submission Parser. Inherits HTTP::Body::MultiPart.

This body type is used to parse XForms submission. In this case, the XML part that contains the model is indicated by the start attribute in the content-type. The XML content is stored unparsed on the parameter XForms:Model.

METHODS

init

This function is overridden to detect the start part of the multipart/related post.

start

Defines the start part of the multipart/related body.

handler

This function is overridden to differ the start part, which should be set as the XForms:Model param if its content type is application/xml.
