NAME

Log::Any::Adapter::File - Simple adapter for logging to files

VERSION

version 1.708

SYNOPSIS

```
use Log::Any::Adapter ('File', '/path/to/file.log');  
  
# or  
  
use Log::Any::Adapter;  
  
...  
  
Log::Any::Adapter->set('File', '/path/to/file.log');  
  
# with minimum level 'warn'  
  
use Log::Any::Adapter (  
    'File', '/path/to/file.log', log_level => 'warn',  
);
```

DESCRIPTION

This simple built-in Log::Any adapter logs each message to the specified file, with a timestamp prefix and newline appended. The file is opened for append with autoflush on. If "flock" is available, the handle will be locked when writing.

The "log_level" attribute may be set to define a minimum level to log.

The "binmode" attribute may be set to define a PerlIO layer string to use when opening the file. The default is ":utf8".

Category is ignored.
