Memoize::ExpireTest(3perl) Perl Programmers Reference Guide Memoize::ExpireTest(3perl)

NAME

Memoize::ExpireTest - test for Memoize expiration semantics

DESCRIPTION

This module is just for testing expiration semantics. It's not a very good example of how to write an expiration module.

If you are looking for an example, I recommend that you look at the simple example in the Memoize::Expire documentation, or at the code for Memoize::Expire itself.

If you have questions, I will be happy to answer them if you send them to mjd-perl-memoize+@plover.com.

perl v5.34.0 2023-11-23 Memoize::ExpireTest(3perl)
