NAME

ModPerl::Const -- ModPerl Constants

Synopsis

```
# make the constants available but don't import them
use ModPerl::Const -compile => qw(constant names ...);

# w/o the => syntax sugar
use ModPerl::Const ("-compile", qw(constant names ...));

# compile and import the constants
use ModPerl::Const qw(constant names ...);
```

Description

This package contains constants specific to mod_perl features.

Refer to "the Apache2::Const description section" for more information.

Constants

Other Constants

"ModPerl::EXIT"

since: 2.0.00

See "ModPerl::Util::exit".
