### ***Rocky Enterprise Linux 9.2 Manual Pages on command 'Module::Loaded.3perl'***

#### ***\$ man Module::Loaded.3perl***

Module::Loaded(3perl) Perl Programmers Reference Guide Module::Loaded(3perl)

#### NAME

Module::Loaded - mark modules as loaded or unloaded

#### SYNOPSIS

```
use Module::Loaded;

$bool = mark_as_loaded('Foo'); # Foo.pm is now marked as loaded

$loc = is_loaded('Foo'); # location of Foo.pm set to the
                        # loaders location

eval "require 'Foo';" # is now a no-op

$bool = mark_as_unloaded('Foo'); # Foo.pm no longer marked as loaded

eval "require 'Foo';" # Will try to find Foo.pm in @INC
```

#### DESCRIPTION

When testing applications, often you find yourself needing to provide functionality in your test environment that would usually be provided by external modules. Rather than munging the %INC by hand to mark these external modules as loaded, so they are not attempted to be loaded by perl, this module offers you a very simple way to mark modules as loaded and/or unloaded.

#### FUNCTIONS

```
$bool = mark_as_loaded( PACKAGE );
```

Marks the package as loaded to perl. "PACKAGE" can be a bareword or string.

If the module is already loaded, "mark\_as\_loaded" will carp about this and tell you from where the "PACKAGE" has been loaded already.

```
$bool = mark_as_unloaded( PACKAGE );
```

Marks the package as unloaded to perl, which is the exact opposite of "mark\_as\_loaded".

"PACKAGE" can be a bareword or string.

If the module is already unloaded, "mark\_as\_unloaded" will carp about this and tell you the "PACKAGE" has been unloaded already.

```
$loc = is_loaded( PACKAGE );
```

"is\_loaded" tells you if "PACKAGE" has been marked as loaded yet. "PACKAGE" can be a bareword or string.

It returns falls if "PACKAGE" has not been loaded yet and the location from where it is said to be loaded on success.

## BUG REPORTS

Please report bugs or other issues to [<bug-module-loaded@rt.cpan.org>](mailto:bug-module-loaded@rt.cpan.org).
