NAME

Net::DBus::Binding::Message::MethodReturn - a message encoding a method return

DESCRIPTION

This module is part of the low-level DBus binding APIs, and should not be used by application code. No guarantees are made about APIs under the "Net::DBus::Binding::" namespace being stable across releases.

This module provides a convenience constructor for creating a message representing an method return.

METHODS

```
my $return = Net::DBus::Binding::Message::MethodReturn->new( call => $method_call);
```

Create a message representing a reply to the method call passed in the "call" parameter.
