Net::DNS::RR::SRV(3pm) User Contributed Perl Documentation Net::DNS::RR::SRV(3pm)

### NAME

Net::DNS::RR::SRV - DNS SRV resource record

### SYNOPSIS

use Net::DNS;

\$rr = new Net::DNS::RR('name SRV priority weight port target');

### DESCRIPTION

Class for DNS Service (SRV) resource records.

### METHODS

The available methods are those inherited from the base class augmented by the type-specific methods defined in this package.

Use of undocumented package features or direct access to internal data structures is discouraged and could result in program termination or other unpredictable behaviour.

#### priority

\$priority = \$rr->priority;

\$rr->priority( \$priority );

Returns the priority for this target host.

#### weight

\$weight = \$rr->weight;

\$rr->weight( \$weight );

Returns the weight for this target host.

port

```
$port = $rr->port;
```

```
$rr->port( $port );
```

Returns the port number for the service on this target host.

target

```
$target = $rr->target;
```

```
$rr->target( $target );
```

Returns the domain name of the target host.

### Sorting of SRV Records

By default, `rrsort()` returns the SRV records sorted from lowest to highest priority and for equal priorities from highest to lowest weight.

Note: This is NOT the order in which connections should be attempted.
