\$ man Net::Time.3perl

Net::Time(3perl) Perl Programmers Reference Guide Net::Time(3perl)

NAME

Net::Time - time and daytime network client interface

SYNOPSIS

```
use Net::Time qw(inet_time inet_daytime);

print inet_time();      # use default host from Net::Config
print inet_time('localhost');
print inet_time('localhost', 'tcp');

print inet_daytime();   # use default host from Net::Config
print inet_daytime('localhost');
print inet_daytime('localhost', 'tcp');
```

DESCRIPTION

"Net::Time" provides subroutines that obtain the time on a remote machine.

Functions

```
"inet_time([$host[, $protocol[, $timeout]])"
```

Obtain the time on \$host, or some default host if \$host is not given or not defined, using the protocol as defined in RFC868. The optional argument \$protocol should define

the protocol to use, either "tcp" or "udp". The result will be a time value in the same units as returned by time() or undef upon failure.

"inet_daytime([\$host[, \$protocol[, \$timeout]])]"

Obtain the time on \$host, or some default host if \$host is not given or not defined, using the protocol as defined in RFC867. The optional argument \$protocol should define the protocol to use, either "tcp" or "udp". The result will be an ASCII string or undef upon failure.

EXPORTS

The following symbols are, or can be, exported by this module:

Default Exports

None.

Optional Exports

"inet_time", "inet_daytime".

Export Tags

None.

KNOWN BUGS

None.
