\$ man PerlIO::mmap.3perl

PerlIO::mmap(3perl) Perl Programmers Reference Guide PerlIO::mmap(3perl)

NAME

PerlIO::mmap - Memory mapped IO

SYNOPSIS

```
open my $fh, '<:mmap', $filename;
```

DESCRIPTION

This layer does "read" and "write" operations by mmap()ing the file if possible, but falls back to the default behavior if not.

IMPLEMENTATION NOTE

"PerlIO::mmap" only exists to use XSLoader to load C code that provides support for using memory mapped IO. One does not need to explicitly "use PerlIO::mmap;".

perl v5.34.0
