Pod::Perldoc::ToPod(3perl) Perl Programmers Reference Guide Pod::Perldoc::ToPod(3perl)

NAME

Pod::Perldoc::ToPod - let Perldoc render Pod as ... Pod!

SYNOPSIS

perldoc -opod Some::Modulename

(That's currently the same as the following:)

perldoc -u Some::Modulename

DESCRIPTION

This is a "plug-in" class that allows Perldoc to display Pod source as itself! Pretty Zen, huh?

Currently this class works by just filtering out the non-Pod stuff from a given input file.
