\$ man Pod::Simple::PullParserEndToken.3perl

Pod::Simple::PullParserEndToken(3Perl)Programmers ReferencePod::Simple::PullParserEndToken(3perl)

NAME

Pod::Simple::PullParserEndToken -- end-tokens from Pod::Simple::PullParser

SYNOPSIS

(See Pod::Simple::PullParser)

DESCRIPTION

When you do `$parser->get_token` on a `Pod::Simple::PullParser`, you might get an object of this class.

This is a subclass of `Pod::Simple::PullParserToken` and inherits all its methods, and adds these methods:

`$token->>tagname`

This returns the tagname for this end-token object. For example, parsing a `"=head1 ..."` line will give you a start-token with the tagname of "head1", token(s) for its content, and then an end-token with the tagname of "head1".

`$token->tagname(somestring)`

This changes the tagname for this end-token object. You probably won't need to do this.

`$token->>tag(...)`

A shortcut for `$token->tagname(...)`

`$token->is_tag(somestring)` or `$token->is_tagname(somestring)`

These are shortcuts for `"$token->tag() eq somestring"`

You're unlikely to ever need to construct an object of this class for yourself, but if you want to, call `"Pod::Simple::PullParserEndToken->new(tagname)"`
