SelectSaver(3perl) Perl Programmers Reference Guide SelectSaver(3perl)

**NAME**

SelectSaver - save and restore selected file handle

**SYNOPSIS**

```
use SelectSaver;

{
    my $saver = SelectSaver->new(FILEHANDLE);
    # FILEHANDLE is selected
}

# previous handle is selected

{
    my $saver = SelectSaver->new;
    # new handle may be selected, or not
}

# previous handle is selected
```

**DESCRIPTION**

A "SelectSaver" object contains a reference to the file handle that was selected when it was created. If its "new" method gets an extra parameter, then that parameter is

selected; otherwise, the selected file handle remains unchanged.

When a "SelectSaver" is destroyed, it re-selects the file handle that was selected when it was created.
