TAP::Base(3perl) Perl Programmers Reference Guide TAP::Base(3perl)

**NAME**

TAP::Base - Base class that provides common functionality to TAP::Parser and TAP::Harness

**VERSION**

Version 3.43

**SYNOPSIS**

```
package TAP::Whatever;  
  
use base 'TAP::Base';  
  
# ... later ...  
  
my $thing = TAP::Whatever->new();  
  
$thing->callback( event => sub {  
    # do something interesting  
});
```

**DESCRIPTION**

"TAP::Base" provides callback management.

**METHODS**

**Class Methods**

"callback"

Install a callback for a named event.

"get\_time"

Return the current time using Time::HiRes if available.

"time\_is\_hires"

Return true if the time returned by get\_time is high resolution (i.e. if Time::HiRes is

available).

"get\_times"

Return array reference of the four-element list of CPU seconds, as with "times" in  
perlfunc.

perl v5.34.0
