Test2::Event::Encoding(3perl) Perl Programmers Reference Guide Test2::Event::Encoding(3perl)

NAME

Test2::Event::Encoding - Set the encoding for the output stream

DESCRIPTION

The encoding event is generated when a test file wants to specify the encoding to be used when formatting its output. This event is intended to be produced by formatter classes and used for interpreting test names, message contents, etc.

SYNOPSIS

```
use Test2::API qw/context/;
use Test2::Event::Encoding;

my $ctx = context();
my $event = $ctx->send_event('Encoding', encoding => 'UTF-8');
```

METHODS

Inherits from Test2::Event. Also defines:

`$encoding = $e->encoding`

The encoding being specified.
