Test2::EventFacet::Info::Table(3pPerl Programmers Reference Test2::EventFacet::Info::Table(3perl)

NAME

Test2::EventFacet::Info::Table - Intermediary representation of a table.

DESCRIPTION

Intermediary representation of a table for use in specialized Test::API::Context methods which generate Test2::EventFacet::Info facets.

SYNOPSIS

```
use Test2::EventFacet::Info::Table;

use Test2::API qw/context/;

sub my_tool {
    my $ctx = context();

    ...

    $ctx->fail(
        $name,
        "failure diag message",
        Test2::EventFacet::Info::Table->new(
            # Required
```

```
rows => [['a', 'b'], ['c', 'd'], ...],
```

```
# Strongly Recommended
```

```
as_string => "... string to print when table cannot be rendered ...",
```

```
# Optional
```

```
header => ['col1', 'col2'],
```

```
collapse => $bool,
```

```
no_collapse => ['col1', ...],
```

```
),
```

```
);
```

```
...
```

```
$ctx->release;
```

```
}
```

```
my_tool();
```

ATTRIBUTES

```
$header_oref = $t->header()
```

```
$rows_oref = $t->rows()
```

```
$bool = $t->collapse()
```

```
$aref = $t->no_collapse()
```

The above are all directly tied to the table hashref structure described in

Test2::EventFacet::Info.

```
$str = $t->as_string()
```

This returns the string form of the table if it was set, otherwise it returns the

string "<TABLE NOT DISPLAYED>".

```
$href = $t->as_hash()
```

This returns the data structure used for tables by Test2::EventFacet::Info.

```
%args = $t->info_args()
```

This returns the arguments that should be used to construct the proper
Test2::EventFacet::Info structure.

```
return (table => $t->as_hash(), details => $t->as_string());
```
