Test2::EventFacet::Plan(3perl) Perl Programmers Reference Guide Test2::EventFacet::Plan(3perl)

NAME

Test2::EventFacet::Plan - Facet for setting the plan

DESCRIPTION

Events use this facet when they need to set the plan.

FIELDS

`$string = $plan->{details}`

`$string = $plan->details()`

Human readable explanation for the plan being set. This is normally not rendered by most formatters except when the "skip" field is also set.

`$positive_int = $plan->{count}`

`$positive_int = $plan->count()`

Set the number of expected assertions. This should usually be set to 0 when "skip" or "none" are also set.

`$bool = $plan->{skip}`

`$bool = $plan->skip()`

When true the entire test should be skipped. This is usually paired with an explanation in the "details" field, and a "control" facet that has "terminate" set to 0.

`$bool = $plan->{none}`

`$bool = $plan->none()`

This is mainly used by legacy Test2::Builder tests which set the plan to "no plan", a construct that predates the much better "done_testing()".

If you are using this in non-legacy code you may need to reconsider the course of your life, maybe a hermitage would suite you?
