\$ man XML::XPathEngine::Number.3pm

XML::XPathEngine::Number(3pm) User Contributed Perl Documentation XML::XPathEngine::Number(3pm)

NAME

XML::XPathEngine::Number - Simple numeric values.

DESCRIPTION

This class holds simple numeric values. It doesn't support -0, +/- Infinity, or NaN, as the XPath spec says it should, but I'm not hurting anyone I don't think.

API

`new($num)`

Creates a new XML::XPathEngine::Number object, with the value in \$num. Does some rudimentary numeric checking on \$num to ensure it actually is a number.

`value()`

Also as overloaded stringification. Returns the numeric value held.
