XtAppAddConverter(3) XT COMPATIBILITY FUNCTIONS XtAppAddConverter(3)

NAME

XtAppAddConverter, XtAddConverter - register resource converter

SYNTAX

```
#include <X11/Intrinsic.h>
```

```
void XtAppAddConverter(XtAppContext app_context, const char *from_type, const char  
    *to_type, XtConverter converter, XtConvertArgList convert_args, Cardinal num_args);
```

```
void XtAddConverter(const char *from_type, const char *to_type, XtConverter converter,  
    XtConvertArgList convert_args, Cardinal num_args);
```

ARGUMENTS

app_context

Specifies the application context.

converter Specifies the type converter procedure.

convert_args

Specifies how to compute the additional arguments to the converter or NULL.

from_type Specifies the source type.

num_args Specifies the number of additional arguments to the converter or zero.

to_type Specifies the destination type.

DESCRIPTION

XtAppAddConverter is equivalent in function to XtAppSetTypeConverter with cache_type equal to XtCacheAll for old-format type converters. It has been superseded by XtAppSetTypeConverter.

XtAddConverter is equivalent in function to XtSetTypeConverter with cache_type equal to XtCacheAll for old-format type converters. It has been superseded by XtSetTypeConverter.
