$ man XtMapWidget.3

XtMapWidget(3)   XT FUNCTIONS   XtMapWidget(3)

NAME

   XtMapWidget, XtSetMappedWhenManaged, XtUnmapWidget - map and unmap widgets

SYNTAX

   #include <X11/Intrinsic.h>

   void XtMapWidget(Widget w);

   void XtSetMappedWhenManaged(Widget w, Boolean map_when_managed);

   void XtUnmapWidget(Widget w);

ARGUMENTS

   map_when_managed

       Specifies a Boolean value that indicates the new value of the map_when_managed

       field.

   w   Specifies the widget.

DESCRIPTION

   If the widget is realized and managed and if the new value of map_when_managed is True,

   XtSetMappedWhenManaged maps the window. If the widget is realized and managed and if the

   new value of map_when_managed is False, it unmaps the window. XtSetMappedWhenManaged is a

   convenience function that is equivalent to (but slightly faster than) calling XtSetValues

   and setting the new value for the mappedWhenManaged resource. As an alternative to using

   XtSetMappedWhenManaged to control mapping, a client may set mapped_when_managed to False

   and use XtMapWidget and XtUnmapWidget explicitly.
