Rocky Enterprise Linux 9.2 Manual Pages on command 'blib.3perl'

\$ man blib.3perl

blib(3perl) Perl Programmers Reference Guide blib(3perl)

NAME

blib - Use MakeMaker's uninstalled version of a package

SYNOPSIS

perl -Mblib script [args...]

perl -Mblib=dir script [args...]

DESCRIPTION

Looks for MakeMaker-like 'blib' directory structure starting in dir (or current directory) and working back up to five levels of '..'.

Intended for use on command line with -M option as a way of testing arbitrary scripts against an uninstalled version of a package.

However it is possible to :

use blib;

or

use blib '..';

etc. if you really must.

BUGS

Pollutes global name space for development only task.
