Linux Ubuntu 22.4.5 Manual Pages on command 'bundle-doctor2.7.1'

$ man bundle-doctor2.7.1

BUNDLE-DOCTOR(1)   BUNDLE-DOCTOR(1)

NAME

    bundle-doctor - Checks the bundle for common problems

SYNOPSIS

    bundle doctor [--quiet] [--gemfile=GEMFILE]

DESCRIPTION

    Checks your Gemfile and gem environment for common problems. If issues are de?

    tected, Bundler prints them and exits status 1. Otherwise, Bundler prints a success

    message and exits status 0.

    Examples of common problems caught by bundle-doctor include:

    ?   Invalid Bundler settings

    ?   Mismatched Ruby versions

    ?   Mismatched platforms

    ?   Uninstalled gems

    ?   Missing dependencies

OPTIONS

    --quiet

        Only output warnings and errors.

    --gemfile=<gemfile>

        The location of the Gemfile(5) which Bundler should use. This defaults to a

        Gemfile(5) in the current working directory. In general, Bundler will assume

        that the location of the Gemfile(5) is also the project?s root and will try

to find Gemfile.lock and vendor/cache relative to this location.
