Rocky Enterprise Linux 9.2 Manual Pages on command 'cups-deviced.8'

$ man cups-deviced.8

cupsd-helper(8)   OpenPrinting   cupsd-helper(8)

NAME

   cupsd-helper - cupsd helper programs (deprecated)

SYNOPSIS

   cups-deviced request-id limit user-id options

   cups-driverd cat ppd-name

   cups-driverd list request_id limit options

   cups-exec sandbox-profile [-g group-id] [-n nice-value] [-u user-id] /path/to/pro?

   gram argv0 ... argvN

DESCRIPTION

   The cupsd-helper programs perform long-running operations on behalf of the scheduler,

   cupsd(8).   The cups-deviced helper program runs each CUPS backend(7) with no arguments in

   order to discover the available printers.

   The cups-driverd helper program lists all available printer drivers, a subset of "match?

   ing" printer drivers, or a copy of a specific driver PPD file.

   The cups-exec helper program runs backends, filters, and other programs. On macOS these

   programs are run in a secure sandbox.

FILES

The cups-driverd program looks for PPD and driver information files in the following di?

rectories:

/Library/Printers

/opt/share/ppd

/System/Library/Printers

/usr/local/share/ppd

/usr/share/cups/drv

/usr/share/cups/model

/usr/share/ppd

PPD files can be compressed using the gzip(1) program or placed in compressed tar(1) ar?

chives to further reduce their size.

Driver information files must conform to the format defined in ppdcfile(5).

NOTES

CUPS printer drivers, backends, and PPD files are deprecated and will no longer be sup?

ported in a future feature release of CUPS. Printers that do not support IPP can be sup?

ported using applications such as ippeveprinter(1).
