Rocky Enterprise Linux 9.2 Manual Pages on command 'devlink-monitor.8'

$ man devlink-monitor.8

DEVLINK-MONITOR(8)   Linux   DEVLINK-MONITOR(8)

NAME

    devlink-monitor - state monitoring

SYNOPSIS

    devlink monitor [all | OBJECT-LIST]

DESCRIPTION

    The devlink utility can monitor the state of devlink devices and ports continuously. This

    option has a slightly different format. Namely, the monitor command is the first in the

    command line and then the object list.

    OBJECT-LIST is the list of object types that we want to monitor. It may contain dev,

    port, health, trap, trap-group, trap-policer.

    devlink opens Devlink Netlink socket, listens on it and dumps state changes.

SEE ALSO

    devlink(8), devlink-dev(8), devlink-sb(8), devlink-port(8), devlink-health(8), devlink-

    trap(8),
