DH_PERL_OPENSSL(1)   User Contributed Perl Documentation   DH_PERL_OPENSSL(1)

NAME

    dh_perl_openssl - add dependencies required for OpenSSL modules

SYNOPSIS

    dh_perl_openssl [debhelper options]

DESCRIPTION

    dh_perl_openssl is a debhelper program that is responsible for adding a dependency on

    perl-openssl-abi-* to the ${perl:Depends} substitution variable. Such a dependency is

    needed for packages that expose the OpenSSL binary interface to Perl code, such as

    pointers to "SSL_CTX" structs.

    A debhelper addon is also provided. This makes it possible to just use

```
#!/usr/bin/make -f
%:
      dh $@ --with perl_openssl
```

    for debian/rules.

    Alternatively, since perl-openssl-defaults/4 you can just build depend on dh-sequence-

perl-openssl and omit the "--with perl_openssl" part.
