Rocky Enterprise Linux 9.2 Manual Pages on command 'dmmp_path_blk_name_get.3'

$ man dmmp_path_blk_name_get.3

dmmp_path_blk_name_get(3) Device Mapper Multipath API - libdmmp Manual dmmp_path_blk_name_get(3)

NAME

dmmp_path_blk_name_get - Retrieve block name.

SYNOPSIS

const char * dmmp_path_blk_name_get (struct dmmp_path *dmmp_p);

ARGUMENTS

dmmp_p   Pointer of 'struct dmmp_path'. If this pointer is NULL, your program will be

terminated by assert.

DESCRIPTION

Retrieve block name of certain path. The example of block names are "sda", "nvme0n1".

RETURN

const char *. No need to free this memory, the resources will get freed when

dmmp_mpath_array_free.
