Rocky Enterprise Linux 9.2 Manual Pages on command 'enchant-2.1'

$ man enchant-2.1

ENCHANT-2(1)   General Commands Manual   ENCHANT-2(1)

NAME

    Enchant - a spellchecker

SYNOPSIS

    enchant-2 -a|-l|-h|-v [-L] [-d DICTIONARY] [FILE]

DESCRIPTION

    Enchant is an ispell-compatible spellchecker.

    -d DICTIONARY

        use the given dictionary

    -p WORDLIST

        use the given personal wordlist

    -a   list suggestions in ispell pipe mode format

    -l   list only the misspellings

    -L   display line numbers

    -h   display help and exit

    -v   display version information and exit

ENCHANT ORDERING FILE

    Enchant uses global and per-user ordering files named enchant.ordering to decide which

    spelling provider to use for particular languages. The per-user file takes precedence.

    The ordering file takes the form language_tag:<comma-separated list of spelling

    providers>. The language tag is an IETF BCP 47 language tag, typically of the form COUN?

    TRY_LANGUAGE. To see what dictionaries are available, run enchant-lsmod-2. '*' is used to

    mean "use this ordering for all languages, unless instructed otherwise." For example:

      *:aspell,hunspell,nuspell

      en:aspell,hunspell,nuspell

      en_GB:hunspell,nuspell,aspell

      fr:hunspell,nuspell,aspell

FILES AND DIRECTORIES

Enchant looks in the following places for files, in decreasing order of precedence:

ENCHANT_CONFIG_DIR

      (If the environment variable is set.)

XDG_CONFIG_HOME/enchant (non-Windows systems)

      Default: ~/.config/enchant

CSIDL_LOCAL_APPDATA\enchant (Windows systems)

      Default: C:\Documents and Settings\username\Local Settings\Application Data\enchant

/usr/share/enchant

      (Or the equivalent location relative to the enchant library for a relocatable

      build.)

Dictionaries are looked for in a subdirectory with the same name as the provider; for ex?

ample, /usr/share/enchant/hunspell and ~/.config/enchant/hunspell.

Some providers may also look in a standard system directory for their dictionaries; the

hunspell provider can be configured to do so at build time.
