### ***Rocky Enterprise Linux 9.2 Manual Pages on command 'git-whatchanged.1'***

**\$ man git-whatchanged.1**

GIT-WHATCHANGED(1)                      Git Manual                      GIT-WHATCHANGED(1)

#### **NAME**

git-whatchanged - Show logs with difference each commit introduces

#### **SYNOPSIS**

git whatchanged <option>...

#### **DESCRIPTION**

Shows commit logs and diff output each commit introduces.

New users are encouraged to use git-log(1) instead. The whatchanged command is essentially the same as git-log(1) but defaults to show the raw format diff output and to skip merges.

The command is kept primarily for historical reasons; fingers of many people who learned Git long before git log was invented by reading Linux kernel mailing list are trained to type it.

#### **EXAMPLES**

git whatchanged -p v2.6.12.. include/scsi drivers/scsi

Show as patches the commits since version v2.6.12 that changed any file in the include/scsi or drivers/scsi subdirectories

git whatchanged --since="2 weeks ago" -- gitk

Show the changes during the last two weeks to the file gitk. The "--" is necessary to avoid confusion with the branch named gitk

#### **GIT**

Part of the git(1) suite

Git 2.34.1

07/07/2023
