## ***Rocky Enterprise Linux 9.2 Manual Pages on command 'im-launch.1'***

**\$ man im-launch.1**

IM-LAUNCH(1)

General Commands Manual

IM-LAUNCH(1)

### NAME

im-launch - launch input method and execute session program

### SYNOPSIS

im-launch SESSION-PROGRAM

### DESCRIPTION

The im-launch command is used to start a input method framework server daemon such as ibus-daemon, set up the appropriate environment variables for the client programs, and execute SESSION-PROGRAM such as x-session-manager.

This command is usually not invoked from the console of a normal user but is normally invoked by the /etc/X11/Xsession.d/70im-config\_launch.

### TROUBLESHOOT

If you have any problem, see the first part of ~/.xsession-errors and look for the cause.

If you are running im-config while Debian (sid) system is undergoing a major library transition, you may need to manually set up ~/.xinputrc with adjusted library version number etc. Please file a bug report to the im-config package using reportbug(1) describing your resolution experience.
