Rocky Enterprise Linux 9.2 Manual Pages on command 'ip-maddress.8'

\$ man ip-maddress.8

IP-MADDRESS(8) Linux IP-MADDRESS(8)

NAME

ip-maddress - multicast addresses management

SYNOPSIS

```
ip [ OPTIONS ] maddress { COMMAND | help }  
ip maddress [ add | del ] MULTIADDR dev NAME  
ip maddress show [ dev NAME ]
```

DESCRIPTION

maddress objects are multicast addresses.

ip maddress show - list multicast addresses

dev NAME (default)

the device name.

ip maddress add - add a multicast address

ip maddress delete - delete a multicast address

These commands attach/detach a static link-layer multicast address to listen on the

interface. Note that it is impossible to join protocol multicast groups statically.

This command only manages link-layer addresses.

address LLADDRESS (default)

the link-layer multicast address.

dev NAME

the device to join/leave this multicast address.
