Rocky Enterprise Linux 9.2 Manual Pages on command 'npm-deprecate.1'

$ man npm-deprecate.1

NPM-DEPRECATE(1)   NPM-DEPRECATE(1)

NAME

    npm-deprecate - Deprecate a version of a package

Synopsis

    npm deprecate <pkg>[@<version range>] <message>

    Note: This command is unaware of workspaces.

Description

    This command will update the npm registry entry for a package, providing a deprecation

    warning to all who attempt to install it.

    It works on version ranges https://semver.npmjs.com/ as well as specific versions, so you

    can do something like this:

      npm deprecate my-thing@"< 0.2.3" "critical bug fixed in v0.2.3"

    SemVer ranges passed to this command are interpreted such that they do include prerelease

    versions. For example:

      npm deprecate my-thing@1.x "1.x is no longer supported"

    In this case, a version my-thing@1.0.0-beta.0 will also be deprecated.

    You must be the package owner to deprecate something. See the owner and adduser help top?

    ics.

    To un-deprecate a package, specify an empty string ("") for the message argument. Note

    that you must use double quotes with no space between them to format an empty string.

Configuration

    <!-- AUTOGENERATED CONFIG DESCRIPTIONS START --> <!-- automatically generated, do not edit

    manually --> <!-- see lib/utils/config/definitions.js -->

registry

? Default: "https://registry.npmjs.org/"

? Type: URL

The base URL of the npm registry. <!-- automatically generated, do not edit manually -->

<!-- see lib/utils/config/definitions.js -->

otp

? Default: null

? Type: null or String

This is a one-time password from a two-factor authenticator. It's needed when publishing

or changing package permissions with npm access.

If not set, and a registry response fails with a challenge for a one-time password, npm

will prompt on the command line for one. <!-- automatically generated, do not edit manu?

ally --> <!-- see lib/utils/config/definitions.js -->

<!-- AUTOGENERATED CONFIG DESCRIPTIONS END -->
