Rocky Enterprise Linux 9.2 Manual Pages on command 'oo.3pm'

\$ man oo.3pm

oo(3pm) User Contributed Perl Documentation oo(3pm)

NAME

oo - syntactic sugar for Moo oneliners

SYNOPSIS

```
perl -Moo=Foo -e 'has bar => ( is => q[ro], default => q[baz] ); print Foo->new->bar'
```

```
# loads an existing class and re-"opens" the package definition
```

```
perl -Moo=+My::Class -e 'print __PACKAGE__->new->bar'
```

DESCRIPTION

oo.pm is a simple source filter that adds "package \$name; use Moo;" to the beginning of your script, intended for use on the command line via the -M option.
