Rocky Enterprise Linux 9.2 Manual Pages on command 'perllexwarn.1'

$ man perllexwarn.1

PERLLEXWARN(1)   Perl Programmers Reference Guide   PERLLEXWARN(1)

NAME

    perllexwarn - Perl Lexical Warnings

DESCRIPTION

    Perl v5.6.0 introduced lexical control over the handling of warnings by category. The

    "warnings" pragma generally replaces the command line flag -w. Documentation on the use

    of lexical warnings, once partly found in this document, is now found in the warnings

    documentation.
