Rocky Enterprise Linux 9.2 Manual Pages on command 'pldd.1'

\$ man pldd.1

PLDD(1) Linux User Manual PLDD(1)

NAME

pldd - display dynamic shared objects linked into a process

SYNOPSIS

pldd pid

pldd option

DESCRIPTION

The pldd command displays a list of the dynamic shared objects (DSOs) that are linked into the process with the specified process ID (PID). The list includes the libraries that have been dynamically loaded using dlopen(3).

OPTIONS

-, --help

Display a help message and exit.

--usage

Display a short usage message and exit.

-V, --version

Display program version information and exit.

EXIT STATUS

On success, pldd exits with the status 0. If the specified process does not exist, the user does not have permission to access its dynamic shared object list, or no command-line arguments are supplied, pldd exists with a status of 1. If given an invalid option, it exits with the status 64.

VERSIONS

pldd is available since glibc 2.15.

CONFORMING TO

The pldd command is not specified by POSIX.1. Some other systems have a similar command.

NOTES

The command

```
lsOf -p PID
```

also shows output that includes the dynamic shared objects that are linked into a process.

The gdb(1) info shared command also shows the shared libraries being used by a process, so

that one can obtain similar output to pldd using a command such as the following (to moni?

tor the process with the specified pid):

```
$ gdb -ex "set confirm off" -ex "set height 0" -ex "info shared" \  
-ex "quit" -p $pid | grep '^0x.*0x'
```

BUGS

From glibc 2.19 to 2.29, pldd was broken: it just hung when executed. This problem was fixed in glibc 2.30, and the fix has been backported to earlier glibc versions in some distributions.

EXAMPLES

```
$ echo $$          # Display PID of shell  
  
1143  
  
$ pldd $$          # Display DSOs linked into the shell  
  
1143: /usr/bin/bash  
  
linux-vdso.so.1  
/lib64/libtinfo.so.5  
/lib64/libdl.so.2  
/lib64/libc.so.6  
/lib64/ld-linux-x86-64.so.2  
/lib64/libnss_files.so.2
```
