## \$ man podman-network-rm.1

podman-network-rm(1)()

podman-network-rm(1)()

### NAME

podman-network-rm - Remove one or more CNI networks

#### **SYNOPSIS**

podman network rm [options] [network...]

#### DESCRIPTION

Delete one or more Podman networks.

### OPTIONS

#### --force, -f

The force option will remove all containers that use the named network. If the container

is running, the container will be stopped and removed.

#### EXAMPLE

Delete the cni-podman9 network

# podman network rm cni-podman9

Deleted: cni-podman9

Delete the fred network and all containers associated with the network.

# podman network rm -f fred

Deleted: fred

### Exit Status

- 0 All specified networks removed
- 1 One of the specified networks did not exist, and no other failures
- 2 The network is in use by a container or a Pod
- 125 The command fails for any other reason
