PTHREAD_ATTR_SETSCHEDPOLICY(3) Linux Programmer's Manual PTHREAD_ATTR_SETSCHEDPOLICY(3)

NAME

pthread_attr_setschedpolicy, pthread_attr_getschedpolicy - set/get scheduling policy at?

tribute in thread attributes object

SYNOPSIS

```
#include <pthread.h>
```

```
int pthread_attr_setschedpolicy(pthread_attr_t *attr, int policy);
```

```
int pthread_attr_getschedpolicy(const pthread_attr_t *attr, int *policy);
```

Compile and link with -pthread.

DESCRIPTION

The pthread_attr_setschedpolicy() function sets the scheduling policy attribute of the thread attributes object referred to by attr to the value specified in policy. This attribute determines the scheduling policy of a thread created using the thread attributes object attr.

The supported values for policy are SCHED_FIFO, SCHED_RR, and SCHED_OTHER, with the semantics described in sched(7).

The pthread_attr_getschedpolicy() returns the scheduling policy attribute of the thread attributes object attr in the buffer pointed to by policy.

In order for the policy setting made by pthread_attr_setschedpolicy() to have effect when calling pthread_create(3), the caller must use pthread_attr_setinheritsched(3) to set the inherit-scheduler attribute of the attributes object attr to PTHREAD_EXPLICIT_SCHED.

RETURN VALUE

On success, these functions return 0; on error, they return a nonzero error number.

ERRORS

`pthread_attr_setschedpolicy()` can fail with the following error:

`EINVAL` Invalid value in policy.

POSIX.1 also documents an optional `ENOTSUP` error ("attempt was made to set the attribute to an unsupported value") for `pthread_attr_setschedpolicy()`.

ATTRIBUTES

For an explanation of the terms used in this section, see [attributes\(7\)](#).
