Rocky Enterprise Linux 9.2 Manual Pages on command 'rpm-plugin-dbus-announce.8'

$ man rpm-plugin-dbus-announce.8

NAME

rpm-plugin-dbus-announce - DBus plugin for the RPM Package Manager

Description

The plugin writes basic information about rpm transactions to the system dbus - like pack?
ages installed or removed. Other programs can subscribe to the signals to be notified of
the packages on the system change.

DBus Signals

Sends StartTransaction and EndTransaction messages from the /org/rpm/Transaction object
with the org.rpm.Transaction interface.

The signal passes the DB cookie as a string and the transaction id as an unsigned 32 bit
integer.

Configuration

There are currently no options for this plugin in particular. See rpm-plugins(8) on how
to control plugins in general.
