Rocky Enterprise Linux 9.2 Manual Pages on command 'rpm-plugin-ima.8'

$ man rpm-plugin-ima.8

NAME

    rpm-plugin-ima - IMA plugin for the RPM Package Manager

Description

    Integrity Measurement Architecture (IMA) and the Linux Extended Verification Module (EVM)

    allow to detect when files have been accidentally or maliciously altered.   This plugin

    puts IMA/EVM signatures in the security.ima extended file attribute during installation.

    This requires packages to contain the signatures - typically by being signed with rpmsign

    --signfiles.

Configuration

    The %_ima_sign_config_files macro controls whether signatures should also be written for

    config files.

    See rpm-plugins(8) on how to control plugins in general.
