Rocky Enterprise Linux 9.2 Manual Pages on command 'rpmdeps.8'

$ man rpmdeps.8

NAME

    rpmdeps - Generate RPM Package Dependencies

SYNOPSIS

    rpmdeps {-P|--provides} {-R|--requires} {--rpmfcdebug} FILE ...

DESCRIPTION

    rpmdeps generates package dependencies for the set of FILE arguments. Each FILE argument

    is searched for Elf32/Elf64, script interpreter, or per-script dependencies, and the de?

    pendencies are printed to stdout.

OPTIONS

    -P, --provides

        Print the provides

    -R, --requires

        Print the requires

    --recommends

        Print the recommends

--suggests

>   Print the suggests

--supplements

>   Print the supplements

--enhances

>   Print the enhances

--conflicts

>   Print the conflicts

--obsoletes

>   Print the obsoletes

--alldeps

>   Print all the dependencies
